

Electric generation from tap water, new breaking mechanism in bicycles and others

Consolation
Other

Dharendra Kumar
Muzzaffarpur, Bihar

Among many other things, Dharendra has made a small turbine system, which can be attached to a tap/overhead water supply pipe to generate electricity. He has also modified the brake system in bicycle. In his bicycle an accelerator like action is used, where by rotating the hand grip, the brakes are applied. The innovator has also modified a foot-operated water pump and a hand pump to make them more efficient and has numerous other ideas.
